

## EDUCATION

---

- MSc student in Applied Mathematics and Informatics, GPA 9.23 / 10.0  
**Higher School of Economics : Faculty of Computer Science** Sep 2019 – Jun 2021  
Joint programme with [Yandex School of Data Science](#)
- BSc in Applied Mathematics and Computer Science, with honors  
**Lomonosov Moscow State University** Sep 2015 – Jun 2019  
[Faculty of Computational Mathematics and Cybernetics](#)

## EXPERIENCE

---

- **Research Intern at Yandex (PyTorch)** Sep 2020 – now
  - Finding **theoretical foundations** for different methods of **uncertainty estimation** in **Deep Learning**
  - **Performance validation** of existing methods for **uncertainty estimation** in different environments
- **Software Engineering Intern at Yandex**  
**Machine Translation department (TensorFlow, MapReduce, NumPy, SciPy)** Jun 2019 – Sep 2019
  - Conducted experiments to improve the quality and diversity of translations
  - Analyzed and found some basic mistakes that baseline approaches make
  - Implemented several successful models and inference techniques in Yandex's machine learning library with an ability to control diversity level
  - **Achieved statistically significant improvement in quality and diversity simultaneously** on Yandex's metrics, human evaluation compared to the baselines and commonly used in scientific field metrics: **about 1.1 growth of max-BLEU** (maximum [BLEU](#) of generated translations) and **about 1.6 times n-gram diversity** (1 - [self-BLEU](#)) **growth**
- **Software Engineering Intern at Yandex**  
**Voice Technology department (C++ STL, MapReduce, Protobuf)** Jun 2018 – Oct 2018
  - Implemented several methods of probability smoothing and their modification in language models for Automatic Speech Recognition
  - Conducted experiments on quality measurement to find the best model among all
  - Implemented an optimal algorithm for constructing n-gram language models in C++ using MapReduce, **which decreased wall time by at least 3 times and slightly increased quality measure** compared to baseline
  - Wrote a complete framework with a set of operations available from CLI

## PROJECTS

---

- **Actual AI Designer (PyTorch) – Mentorship in a high school project** Aug 2020 – now  
A tool for automatic generating logos based on the description (in the very beginning)
  - **Teaching** students the necessary topics in **machine learning, computer vision** and other technical skills sufficient to complete the project
  - **Task management** in the project
- **BigARTM (C++ Boost/STL, Protobuf, Travis CI, AppVeyor)** Jan 2017 – May 2019  
Open Source library for topic modelling with support of multiple regularization
  - Developed and supported a tool for parallel calculation of pairwise word statistics such as frequency of mutual occurrence, PMI in large text corpora in conditions of low RAM  
**Wikipedia full-text processing takes 6 hours on octa-core intel core i5 8th gen, taking less than 8 Gb of RAM compared to at least 20 Gb needed before** ([code sample](#))
- **Various Contributions:**
  - Support TensorFlow 2.x versions of home tasks of the Yandex's [Reinforcement Learning course](#)
  - Answering questions on [stack exchange](#) (sometimes)

## TECHNICAL SKILLS

---

- **Languages used at work:** C++, Python, C, Bash
- **Basic knowledge:** SQL, Assembly language
- **Technologies:** MapReduce, Protobuf, C++ Boost, CMake, Make, SciPy, CVXPY, Scikit-learn, NumPy, Pandas, Docker
- **Deep Learning frameworks used at work:** PyTorch, TensorFlow, Keras
- **Tools:** Git, Subversion, UNIX/Linux, Travis CI, AppVeyor, L<sup>A</sup>T<sub>E</sub>X
