EDUCATION

- MSc student in Applied Mathematics and Computer Science
  Higher School of Economics : Faculty of Computer Science   Sep 2019 – Jun 2021
  Joint programme with Yandex School of Data Science

- BSc in Applied Mathematics and Computer Science, GPA 4.89 / 5.0
  Lomonosov Moscow State University   Sep 2015 – Jun 2019
  Faculty of Computational Mathematics and Cybernetics

EXPERIENCE

- **Software Engineering Intern at Yandex**
  Machine Translation department (TensorFlow, MapReduce, NumPy, SciPy)   Jun 2019 – Sep 2019
  - Conducted experiments to improve quality and diversity of translations
  - Analyzed and found some basic mistakes that baseline approaches make
  - Implemented several successful models and inference techniques in the Yandex's machine learning library with an ability to control diversity level
  - **Achieved statistically significant improvement in quality and diversity simultaneously** on Yandex's metrics, human evaluation compared to the baselines and commonly used in scientific field metrics: **about 1.1 growth of max-BLEU** (maximum BLEU of generated translations) and **about 1.6 times n-gram diversity** (1 - self-BLEU) **growth**

- **Software Engineering Intern at Yandex**
  Voice Technology department (C++ STL, MapReduce, Protobuf)   Jun 2018 – Oct 2018
  - Implemented several methods of probability smoothing and their modification in language models for Automatic Speech Recognition
  - Conducted experiments on quality measurement to find the best model among all
  - Implemented an optimal algorithm for constructing n-gram language models in C++ using MapReduce, **which decreased wall time by at least 3 times and slightly increased quality measure** compared to baseline
  - Wrote a complete framework with a set of operations available from CLI

PROJECTS

- **BigARTM** (**C++ Boost/STL, Protobuf, Travis, AppVeyor**)   Jan 2017 – May 2019
  Open Source library for topic modelling with support of multiple regularization
  - Developed and supported a tool for parallel calculation of pairwise word statistics such as frequency of mutual occurrence, PMI in large text corpora in conditions of low RAM
    Wikipedia full-text processing takes 6 hours on octa-core intel core i5 8th gen, taking less then 8 Gb of RAM compared to at least 20 Gb needed before

- **Implementation of various ML algorithms** (**PyTorch, NumPy, Scipy**)
  - **kNN, works about 3 times faster than Scikit-learn implementation**
  - **EM algorithm for noisy pictures refinement**
  - **Convolutional Neural Net from scratch in NumPy**
  - **Sparse Variational Dropout, which allows to reduce the memory consumption for matrix storage by 30 times without loss of quality on the mnist dataset (original paper)**

TECHNICAL SKILLS

- **Languages used at work**: C++, Python, C, Bash
- **Basic knowledge**: SQL, Assembly language
- **Technologies**: MapReduce, Protobuf, C++ Boost, CMake, Make, SciPy, CVXPY, Scikit-learn, NumPy, Pandas, Docker
- **Deep Learning frameworks used at work**: PyTorch, TensorFlow, Keras
- **Tools**: Git, Subversion, UNIX/Linux, Travis, AppVeyor, LaTeX

- **Machine Learning (@ CMC MSU)**
- **Bayesian Methods of Machine Learning (@ CMC MSU)**
- **Bayesian Methods of Deep Learning (@ CMC MSU)**
- **Probabilistic Topic Modeling (@ CMC MSU)**
- **Computer Vision (@ YSDA)**
- **Natural Language Processing (@ YSDA)**
- **Convex Analysis and Optimization (@ YSDA)**

DIPLOMA PAPER

- **Probabilistic Topic Models based on word co-occurrence data**

OLYMPIADS

- First degree diploma in student's Applied Math and Computer Science olympiad of the Higher School of Economics March 2019
